

Math Colloquium CIDMA/UAlg

Project work on solving Fermi problems

Nélia Amado

CIDMA and UAlg

Abstract: Project work is an approach widely used at all levels of education. Starting with a problem, students seek to solve it by applying knowledge they have already acquired and, at the same time, acquiring new knowledge and developing various skills. I will present some characteristics of project work in solving Fermi problems, highlighting several advantages in the process of teaching and learning mathematics.
